

Scriptural Expression Study

Scriptural Expression Study — Phase Progress

OVERALL CONCLUSION: Phase 3 — Sung Word produced the strongest overall results, with physical health, mental/spiritual clarity, and sleep all improving together.

STORY IN BRIEF

Phase 1 ended 2.5 points higher in physical health and 3.0 points higher in mental/spiritual clarity than it began, while sleep was 0.8 points lower.

Phase 2 ended with sleep 2.7 points higher, although physical and mental/spiritual ratings were each 1.0 point lower.

Phase 3 showed the most consistent direction: physical health rose 0.5 points, mental/spiritual clarity 1.0 point, and sleep 0.8 points from its first to last study date. Results are daily group averages and do not use names or aliases.

Phase 2 — Spoken Decree			
Study Date	Physical Health	Mental / Spiritual	Sleep Quality
Aug 28	9.0	9.0	7.3
Aug 29	4.0	7.0	7.0
Sep 2	6.0	6.2	5.9
Sep 3	6.3	6.2	6.1
Sep 4	6.3	6.4	6.0

Sep 5	6.5	6.5	6.4
Sep 6	6.6	6.6	6.5
Sep 7	6.7	6.3	6.7
Sep 8	9.0	10.0	10.0
Sep 9	7.5	8.5	7.5
Sep 10	9.0	10.0	9.0
Sep 11	8.0	8.0	10.0

Phase 3 — Sung Word			
Study Date	Physical Health	Mental / Spiritual	Sleep Quality
Sep 7	6.5	6.3	6.6
Sep 8	6.1	6.8	6.6
Sep 9	6.2	7.1	6.7
Sep 10	6.1	6.8	6.2

Sep 11	6.8	7.0	6.7
Sep 12	7.0	7.3	7.3

GENERAL COMMENTS — DOCUMENTED MIRACLES AND BREAKTHROUGHS

PHASE 1 — BASELINE

Participants documented sudden or noticeable relief from pain and illness symptoms, including intestinal pain, lower-back pain, difficulty walking, and allergy-like symptoms. Other reports described a recovering pet, protection during severe weather, lifting emotional oppression, unusual peace, improved sleep, positive family or work outcomes, practical provision, and greater understanding of forgiveness and Scripture.

PHASE 2 — SPOKEN DECREE

Reported breakthroughs included reduced back pain and improved mobility, a painful rash nearly disappearing, better sleep and energy, and inflammation decreasing enough to make a less-invasive surgery possible. Participants also described protection from near-miss incidents and illness, lost items being found after prayer, reconciliation and forgiveness, renewed family contact—including a family gathering after years apart—and greater peace during stressful situations.

PHASE 3 — SUNG WORD

Participants documented improved sleep, energy and strength; stable overnight blood glucose; increased mobility for an ill spouse; relief from tooth, toe, sinus, headache, and other pain; and medical discoveries or advocacy that provided clearer next steps. Other reports included renewed contact with family, a hospitalized relative improving, financial provision and benefits approval, successful project completion, safe travel, reduced anxiety, deeper peace, and greater confidence about health decisions.
